

## Level 2 Questions

- 1) Explore this app: <https://github.com/marcellis/demorecyclerview> and explain why recyclerview is called “recycler”
  - 2) What is the difference of a staggered grid comparing to a normal grid?
  - 3) What is the purpose of logcat?
  - 4) Would you use logcat developing Android apps? Why or why not?
- 
- 1) It reuses the same layout from previous items in the list and fills it with new items.
  - 2) A staggered grid extends RecyclerView.layoutmanager and a normal grid uses its own 2 dimensional scrollable grid.
  - 3) Logcat Displays system messages in real time and keeps track of old messages.
  - 4) Yes, because you could use logcat to keep track of important messages such as selfmade logs.
